SCOPE: Biostatistics is the application of statistics to different topics in biology including medicine, pharmacy, public health science, agriculture and fishery. It involves the analysis of data from experiments; its interpretation and drawing conclusion from the results. It involves the application of statistical theory to real-world problems, the practice of designing and conducting biomedical experiments and clinical trials. Design of experiments is planning experimental strategy, screening a large number of parameters and selecting the important ones, determining the minimum number of experiments and deciding on the mode and manner in which experiment have to be conducted. The course encompasses topics such as distribution of data, sample size, tests of significance, data reduction, regression analysis, comparison of performance of drugs in clinical trials, design of experiments, screening and second order designs.

UNIT I

Introduction to Statistics

Various Distributions: Normal Distribution, sample and Population, Z distribution.

UNIT II

Test of Significance, t- test, F test, ANOVA.

UNIT III

2 test/odds ratio, Non-Parametric test, other tests.

UNIT IV

Design of Experiments: Introduction to design of experiments, screening designs – Data Analysis.

UNIT V

Higher order Designs - Data analysis
Regression Analysis – Data reduction
